

The Adventures of Peter Pent Of Gon

Written By Matt St.Hilaire
Illustrated By Danielle St.Hilaire

Once upon a time there lived a prince called Peter. Peter was a part of the royal family Pent of gon. Peter was not like his dad, Tom, or two brother, Ted and Tim.

Peter was irregular but his dad and two brothers were regular. Peter was 5 foot 8 inches tall while his dad and brothers were 6 foot exactly.

One day while Peter was out a wizard showed up at the castle. He walked in and said, "Your reign is over. Once you are out of the way the Hex of gon family can take over."

The wizard took out a pair of llet wands and transformed Tom, Tim, and Ted into cones.

Peter came back to hear his mom weeping. “What’s wrong mom” Peter asked. “Your father and brothers have been changed in to cones.” Peter looked at them in shock.

“Peter” the king said in a weak voice, “I know How to reverse this. Go to the village of equilateral and find the 5 triangles of congruency. They will change us back. And Peter take this with you.” The king handed Peter an orb with a check mark looking symbol on it.

So Peter went off to find the city of equilateral which his dad said was to the north. He traveled north and got to the forest of geometrees. Peter walked in the forest and saw a root that was square, it had 10 thorns on it.

Peter tried to walk by it but 100 thorns popped out. Quickly Peter grabbed the item his father gave him. He threw it at the thorns and they quickly disappeared into 10 again. "That was radical." Peter said.

After walking through the Geometree forest Peter saw a village off into the distance. Peter started to run toward the village.

Peter ran up to the village and in big words there was a sign that said "Welcome to the village of equilateral."

Peter walked through the town and saw that all the houses were the same size. He stopped a villager and asked, "Do you know where the 5 equilateral triangles are?"

"Last I heard, Mr. Regular had them. He lives at the base of the mountain" Peter thanked him and ran to Mr. Regular's house to get the 5 triangles.

Peter got to Mr. Regular's house and knocked on the door. "Hello." Mr. Regular said, "How can I help you." Peter explained the situation to Mr. Regular. "Oh I see. I have those triangles right back here."

Mr. Regular went into a back room and grabbed a shield with 5 triangles of the same size in it. "Here you go." Mr. Regular said. "Thank you so much." Peter said and then headed back to the castle as fast as he could.

Peter ran as fast as he could through the forest of geometrees and saw another square root. It was about to change and make 100 thorns.

Peter reached into his pocket and grabbed the orb. He threw the orb right at the root. The root then went back down to normal size.

After a long time of traveling Peter had gotten back to the castle. He charged in. "Peter!" All the royal family yelled in joy.

Peter aimed the shield at the king and his two brothers. Peter recited the spell Mr. Regular told him to. His dad and brothers then turned back to normal.

“Not so fast.” The wizard of the Hex of gon family said. He pulled out his wands tried to cast a spell on the royal family. “No you don’t.” Peter said. He put the shield up and blocked the spell and shot it back at the wizard.

The wizard's pair of lilel wands bent and crossed over each other. Then the wizard turned into a cone. “What!? NOOOOOOOOOOO!” The wizard yelped.

So Peter saved his family and the Pent of gon family
lived happily ever after.
